Networks That Inform Activity

## Networks That Work For Us – Building Partnerships To Develop Student And Graduate Opportunities

Demand from students drove the development of business engaged activity and the creation of business incubation space. We have and continue to use our networking partners to develop business opportunities for students and graduates. Through our business incubator and we are now actively building partnerships with business to develop a range of grown spaces including in-house grown space with an insurance company, working with the city council to develop a Digital and Media Arts business centre and also a pop-up studio space in the build-up to the TDF. My challenge is to now build stronger links into the curriculum through embedding the potential networks offer to enhance enterprise education. As well as achieve active participation in extracurricular opportunities?
